

Please don't restrict satellite radio. I maintain a residence in Maine and another in Texas, and drive between the two frequently. Satellite radio, XM in my case, is my companion and entertainment. The availability of news and weather, in addition to the varied content, mean that I have it running practically non-stop on my 4-day drives. Commercial radio is difficult to utilize, as I quickly move in and out of range of local radio stations and can't waste my time trying to scan for appropriate programming. Please reject the petition of the NAB (04-160) and allow satellite radio to continue servicing its many satisfied customers. Thank you.
